

Communication

Date	27 June 2026
Team ID	
Project Name	Rising Waters
Maximum Marks	1 Mark

Communication Plan:

Effective communication is essential for a successful project demonstration. This document outlines the communication strategy used within the team and with stakeholders throughout the project lifecycle, including how updates, issues, and feedback were managed.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily	WhatsApp Group / Google Meet	All Team Members	Quick updates on yesterday's progress, today's goals, and any immediate blockers or issues.
2	Progress Update	Weekly	SkillWallet Platform / Email	Team Members & Mentor	Summarize sprint achievements, track overall velocity, and assign upcoming backlog tasks.
3	Issue / Bug Discussion	As Needed	GitHub Issues / Discord / Slack	Developers involved in the task	Troubleshoot specific technical errors (e.g., Flask routing bugs, model deployment issues) and track fixes
4	Stakeholder Review	Bi-Weekly	Zoom / Microsoft Teams	Full Team & Mentor / Evaluator	Demonstrate working increments (e.g., the trained ML model, the UI) and gather actionable feedback.
5	Final Demo Rehearsal	Once	Google Meet (Screen Share)	All Team Members	Practice the project presentation, ensure smooth transitions, and test the live IBM Cloud deployment.
6	Code Review	Per Pull Request	GitHub	Developers	Ensure code quality, review ML model performance, and verify integration before merging to the main branch.

Communication Challenges & Resolutions:

S.No	Challenge Faced	Resolution / Action Taken
1	Difficulty scheduling live daily standups due to conflicting class/lab schedules.	Shifted to asynchronous daily updates via a dedicated WhatsApp thread where everyone posts their status by 8:00 PM.
2	Misalignment between the ML model inputs (data types) and what the Flask backend was passing to model.pkl.	Held a focused, 30-minute screen-sharing session to define a strict data format agreement, documenting it in a shared Google Doc.
3	Delays in resolving technical bugs because error messages were not shared clearly.	Established a rule that all bug discussions must include a screenshot of the error, the relevant code snippet, and the expected outcome.
